10. Azure Partner / CSP Billing
11. Microsoft Licensing Support / CSP
12. Azure Document Intelligence

Who Is Wired CIO

"When your technology works, so do your people." — what every SDR needs to know cold before the first dial.

Overview

Wired CIO builds the IT department of the future: one Microsoft-aligned partner to grow, protect, automate, and align a business. We're an IT partner for growing businesses — fully managed or co-managed, built on the Microsoft cloud, and accountable for the whole stack, not just the help desk.

Founded by Russell, a technology leader with 15 years of IT experience and deep Microsoft expertise. The company exists because of a gap he saw firsthand: large enterprises run IT with reporting trees of eighty-plus specialists — help desk, system administrators, security engineers, and more — but growing companies need most of those same capabilities and can't field that full roster themselves. That's the gap Wired CIO fills.

Headquartered in Chicago, also serving the Cincinnati market. Core values: transparency, continuous improvement, and a solution-first mindset — proactive strategy, not reactionary fixes.

Why This Is a Different Pitch Than "We Do IT Support"

Most traditional IT contracts cover day-to-day tickets and nothing else — strategy, applications, security, and compliance sit outside the scope, handled ad hoc or not at all. Wired CIO's scope is strategy, operations, security, applications, and compliance from one accountable team.

A dedicated vCIO owns the technology roadmap so a client's IT evolves with the business instead of reacting to it after something breaks — this is a strategic relationship, not a vendor relationship.

Wired CIO is the single point of contact for every technology vendor — ISPs, SaaS providers, hardware vendors — and owns their tickets directly, so the client's own team stops chasing support lines.

Key Facts — Know This Cold

- Tagline: *"When your technology works, so do your people."*
- Full service line-up: Managed IT Services, Cybersecurity, Cloud Services, IT Consulting & Advisory, Backup & Disaster Recovery, Compliance Services, Vendor Management, and Technical Training & Support — plus, covered elsewhere in this playbook, Dynamics 365 (ERP/CRM) and Custom Application Development.
- ICP: growing small-to-midsize businesses that need enterprise-grade IT capability without hiring an enterprise-sized internal team. Named industries include Small Business, Manufacturing, and Healthcare (HIPAA/compliance-driven).
- Pricing model: a flat monthly rate per person, which covers their primary device — shared and additional devices are a small add-on. Simple and predictable; never quote a specific number cold, that comes after Discovery.
- Engagement structure: a rolling 90-day commitment, not a multi-year lock-in — "we earn your business every quarter." A strong, disarming answer to the "long contract" objection.
- Sales motion: Discovery (ballpark scope and budget shared early, no signature expected) → Design → fixed-scope pricing, presented two ways side by side — a straight hourly project, or the same scope amortized monthly with support included.

Be Ready to Answer These (Prospects Will Ask)

1. "How is this different from just hiring an IT person?" — Point to the comprehensive scope: strategy, security, applications, and compliance from one accountable team, not just a warm body closing tickets.
2. "What's the contract length?" — A rolling 90-day commitment, not a multi-year lock-in.
3. "How much does this cost?" — Flat monthly rate per person, covering their primary device. Give a real ballpark only after Discovery, never a number cold.
4. "Are you a Microsoft shop, or can you work with anything?" — Microsoft-aligned by design: M365, Azure, and Dynamics 365 are the whole-stack story.
5. "We already have IT — why would we need you?" — Find out if there's real co-managed potential (see that sheet) before assuming this has to be a full replacement conversation.

Objection Handling

If they say...	Ask / respond with...
"That sounds expensive."	Reframe around the flat per-person rate and the 90-day commitment — no long-term risk,
"We like our current IT person/provider."	Ask what's NOT covered today — strategy, security, compliance, applications are the gaps
"We don't have time for a call right now."	Acknowledge it, then ask for a specific window instead of "send me info" — log a real follow

EXECUTION · 2 of 12

Outbound Execution Playbook

How an SDR performs and executes an outbound call — from dial to booked Discovery.

Overview

An SDR's job on an outbound call is narrow and specific: qualify fit and interest fast, using the language in this playbook, and book a Discovery call. You are selling the next step — a 20-30 minute Discovery conversation — not the IT services themselves. Don't over-pitch on the first call.

Every lead an SDR works has already been triaged by Wired CIO's own detection engine into a tier (Strong Signal / Needs Review / Bad Lead) and a product-line category (Dynamics 365 or M365/Azure) before it ever reaches a dial list. Know which tier and category a lead landed in before you call — it tells you which service-line sheet in this library to have open.

Call Flow

- 1. Open on their situation, not our services.** Mirror the trigger that got them on the list (a stated pain point, a piece of language from their form fill or CSV notes) — don't lead with a features pitch.
- 2. Confirm the trigger.** What changed, or what are they actively dealing with right now? This is where you find out if the signal that qualified them is still real.
- 3. Run the category-specific discovery questions** from the matching service-line sheet (Dynamics 365, MSP, Custom App Dev, Licensing, etc.).
- 4. Qualify against the tier framework below** before you ask for the meeting — don't book a Discovery call on a lead that's really a Bad Lead in disguise.
- 5. Book Discovery and set expectations.** Wired CIO comes back with a ballpark scope, not a hard sell — no signature expected at that stage. That's an easy, low-pressure ask.

Qualify Like the Scanner Does

- + Strong Signal: a real trigger (a stated pain point, timeline, or event) PLUS a real number, timeline, or named decision-maker. Book Discovery now.
- + Needs Review: real interest, but missing a number, timeline, or clear owner. Ask one more qualifying question before booking, or log a specific, dated follow-up rather than letting it drift.
- + A confirmed seat/user count of 15+ is the internal strong-signal bar for licensing and Dynamics conversations — smaller confirmed counts still get worked, just at lower priority.

Auto-Disqualify Language — Master List

- x Single-seat / freelancer language — not a real seat-count opportunity.
- x A flat rejection: "not interested," "unsubscribe."
- x "We're happy with our current provider" / locked into an existing contract.
- x Personal, non-business use.
- x A one-off basic support issue (password reset, locked out) — a ticket, not a relationship opportunity.
- x They want Microsoft's own direct support, not a partner/reseller.

- x Internal CRM/Opportunity notes describing a deal someone else already owns — third-person pipeline language, not a fresh lead's own interest.
- x Small one-off project or free-advice language: "pick your brain," "free consultation," "no budget," "not looking to hire/engage/pay."

Objection Framework (Generic — See Each Sheet for Specifics)

If they say...	Ask / respond with...
"How much does this cost?"	Never quote a number cold. Explain the model (flat monthly rate per person, 90-day rolling
"We already have someone."	Find out if it's a full replacement "no," or a co-managed gap — don't assume. See the Co-I
"Just send me some info."	Treat as a soft no. Get one more qualifying answer before agreeing, and lock a specific fo
"Not the right time."	Ask what would need to change, and when their next budget/planning cycle starts. Log a n

Handoff — What a Booked Discovery Call Needs

Company name, contact, the product-line category (Dynamics 365 / M365-Azure / MSP / Custom App Dev / etc.), the tier you qualified them at, and the specific trigger language they used on the call. That's what becomes the account team's opening line in Discovery — don't let it get lost in a generic handoff note.

DYNAMICS 365 · 3 of 12

Dynamics 365 — Platform Overview

How to talk about Microsoft's ERP + CRM suite, and how Wired CIO fits in.

Overview

Dynamics 365 is Microsoft's combined ERP and CRM product family. It covers everything from finance and supply chain (Business Central, Finance and Operations, Supply Chain Management — the modern successors to AX, NAV, and GP) to sales, service, and marketing (Dynamics 365 Sales, Customer Engagement, Customer Insights, Field Service) to project-based business management (Project Operations).

Most prospects won't say "Dynamics 365" by name — they'll describe the pain (an aging ERP, a spreadsheet-based sales process, a system that doesn't talk to their other tools) or name the specific product/module ("Business Central," "CRM," "NAV," "GP"). Learn to recognize both.

Wired CIO's Angle

Wired CIO isn't a pure Dynamics reseller — we're the partner for the whole Microsoft stack. A Dynamics deal almost always comes bundled with a tenant, licensing, and ongoing support conversation, which is our real differentiator against a Dynamics-only VAR: one partner, one relationship, for the ERP/CRM AND everything it runs on.

Internally we work Dynamics leads in priority order: Business Central/ERP first, then Sales/CRM, then everything else in the family (Project Operations, HR, Marketing, Field Service, Customer Insights). ERP conversations tend to be the biggest, stickiest engagements — lead with those when a prospect could go either way.

Discovery Questions — Ask On the Call

1. Are you currently on Dynamics 365, an older Dynamics product (CRM, AX, NAV, GP), or a different ERP/CRM platform entirely (Salesforce, NetSuite, SAP, QuickBooks)?
2. Roughly how many users/seats would be on the system?
3. Is this a brand-new implementation, a migration off an on-prem system, or an upgrade of an existing Dynamics deployment?
4. What's driving the timing — a budget cycle, a specific pain point, an end-of-life deadline, a leadership mandate?
5. Who else is involved in this decision — IT, Finance, Operations, a specific department head?
6. Do you already have a tenant/M365 environment set up, or would this be part of a broader Microsoft rollout?

Buying Signals — Listen For This Language

- + A named module (Business Central, D365 Sales, CRM, Project Operations, etc.) mentioned alongside a real or estimated user/seat count.
- + ERP and CRM mentioned together in the same conversation — usually a bigger, more strategic project.
- + Trigger language: "upgrade," "budget," "this year," a specific timeline.

+ Any bare number sitting next to a Dynamics product mention (often a seat count described informally, e.g. "Business Central — 25 users").

Red Flags — Not a Fit / Disqualify

- x Single-user or freelancer language — not a real seat-count opportunity.
- x Flat rejection: "not interested," "unsubscribe."
- x "We're happy with our current provider" / locked into an existing contract.
- x Personal, non-business use.
- x A one-off support issue (password reset, locked out) — not a system project.
- x They want Microsoft's own direct support, not a partner/reseller.
- x Internal CRM/Opportunity notes describing a deal someone else already owns ("owner of this opportunity," "Partner: [name]," "advancing the sales cycle") — this is pipeline management language, not a fresh lead's own interest.
- x Small one-off project or free-advice language: "pick your brain," "free consultation," "no budget," "not looking to hire/engage/pay."

Objection Handling

If they say...	Ask / respond with...
"We already have a system."	Ask what's not working, or whether it's approaching end-of-life / out of support. Most Dyna
"That sounds expensive."	Ask what they're spending today across licensing, maintenance, and any consultants — th
"Not a priority right now."	Ask what would need to be true for it to become one, and when their next budget cycle sta

Cross-Sell / Related Offerings

Every Dynamics deployment needs a tenant, licensing, and ongoing support — always ask about their M365/Azure and licensing situation even on a pure Dynamics call.

Business Central / ERP

Cloud ERP for finance, supply chain, and operations — our highest-priority Dynamics module.

Overview

Business Central (and its predecessors NAV, GP, and AX, plus Finance and Operations and Supply Chain Management for larger orgs) is Microsoft's cloud ERP line — general ledger, AP/AR, inventory, supply chain, manufacturing, and project accounting in one system.

This is the single highest-priority Dynamics conversation for us. ERP replacements are large, multi-year, deeply embedded engagements — once a company is live on Business Central, it becomes the system of record for the whole business, not just one department.

Discovery Questions — Ask On the Call

- 1. What are you running finance and operations on today — NAV, GP, AX, QuickBooks, another ERP, or spreadsheets?
- 2. Roughly how many users would need licenses?
- 3. Is this just finance, or does it also cover supply chain, inventory, and manufacturing?
- 4. What's forcing the change — end-of-life support, you've outgrown the current system, an acquisition, a compliance requirement?
- 5. What's the target go-live window?
- 6. Do you have an internal champion (CFO, Controller, Ops lead) driving this?

Buying Signals — Listen For This Language

- + "Business Central," "ERP," "NAV," "GP," "AX," "Finance and Operations," or "Supply Chain Management" mentioned by name.
- + A stated or estimated user count alongside any of the above.
- + End-of-life / no-longer-supported language about a current system.
- + Multi-department scope (finance + supply chain + operations together).

Objection Handling

If they say...	Ask / respond with...
"We already have an ERP."	Ask what's not working, or if it's end-of-life / no longer supported by the vendor. That's usu
"Too expensive to replace."	Ask about the current total cost — licensing, maintenance, consultants, workarounds — m
"Not now."	Ask about their budget cycle and log a follow-up for that window — ERP decisions are pla

Cross-Sell / Related Offerings

Business Central customers almost always need Azure hosting/tenant support and M365 licensing alongside the ERP itself — always ask.

DYNAMICS 365 · 5 of 12

Dynamics 365 Sales / CRM

Sales, Customer Engagement, Customer Insights, Field Service, Marketing.

Overview

Covers Dynamics 365 Sales, Customer Engagement, Customer Insights, Field Service, Marketing, and Contact Center — the CRM side of the Dynamics family, as opposed to the ERP side (Business Central).

Note: Business Central/ERP language always takes priority internally — if a lead mentions both ERP and CRM/Sales language, it's worked as an ERP opportunity, not a CRM one. Don't double-pitch a lead that's really an ERP conversation.

Discovery Questions — Ask On the Call

1. What are you using for CRM today — Salesforce, HubSpot, spreadsheets, nothing formal?
2. How many sales and/or service users would need licenses?
3. Which functions are in scope — Sales, Customer Service, Marketing, Field Service?
4. Does this need to integrate with an ERP or financial system (especially Business Central)?
5. What does the current sales/service process look like, and where does it break down?
6. Is there a data migration involved — how much historical data, from what system?

Buying Signals — Listen For This Language

- + "Sales," "CRM," "Customer Engagement," "Field Service," "Marketing," or "Insights" mentioned by name, with a real or estimated user count.
- + Trigger language: "upgrade," "budget," "this year."
- + Explicit dissatisfaction with a current CRM or a manual/spreadsheet process.

Red Flags — Not a Fit / Disqualify

- x If Business Central/ERP language also appears in the same lead, treat it as an ERP opportunity — don't pitch CRM in parallel.

Cross-Sell / Related Offerings

Power BI/reporting on top of CRM data, and Azure for any custom integrations, are natural next conversations.

DYNAMICS 365 · 6 of 12

Dynamics 365 Project Operations

Project-based business management — resourcing, time/expense, project accounting.

Overview

Project Operations is built for project-based businesses — professional services, engineering, construction, consulting firms — that need to manage resourcing, time and expense tracking, and project accounting in one system, tied to sales and (ideally) financials.

It's technically one of the Dynamics 365 Sales/CRM-family modules internally, but it's a distinct enough conversation to prep for separately: the buyer is usually a services-firm operations or finance lead, not a traditional sales director.

Discovery Questions — Ask On the Call

1. How do you currently track project time, budgets, and resourcing — spreadsheets, a dedicated PSA (professional services automation) tool, something else?
2. Roughly how many billable/project resources are involved?
3. Do you need project accounting tied directly to your financials/ERP?
4. What's the biggest pain point — utilization visibility, resource scheduling, billing accuracy, forecasting?
5. Are you already on (or planning) Business Central or another Dynamics ERP?

Buying Signals — Listen For This Language

- + "Project Operations," "PSA," "resource scheduling," or "project accounting" mentioned, even in otherwise generic phrasing.
- + Any project-based services company (consulting, engineering, construction, agencies) describing manual/spreadsheet-based project tracking.

Cross-Sell / Related Offerings

Pairs naturally with Business Central for a full project-to-cash workflow — always ask about ERP plans in the same conversation.

MANAGED IT · 7 of 12

Managed IT Services (MSP)

Our core recurring offering — the umbrella every other service line nests under.

Overview

Fully outsourced IT: help desk, endpoint and network management, patching, monitoring, and vendor management. This is Wired CIO's core, recurring-revenue offering, and it's the umbrella almost every other conversation (security, backup/DR, compliance, licensing, cloud) can nest under.

Discovery Questions — Ask On the Call

1. Do you have internal IT today, or is it fully outsourced already?
2. Roughly how many employees/devices would need support?
3. If you have a current provider, what's not working — response time, expertise, cost, communication?
4. Are you looking for full outsourcing, or to supplement an internal team (co-managed — see that sheet)?
5. What's driving the change right now — a bad experience, a security concern, growth, a cost review?
6. Do you have any compliance requirements (HIPAA, CMMC, PCI, cyber insurance requirements) driving this?

Buying Signals — Listen For This Language

- + "IT support," "help desk," managed services / MSP language.
- + Growth or overload language: "stretched thin," "overwhelmed," "understaffed."
- + Explicit dissatisfaction with a current provider.

Red Flags — Not a Fit / Disqualify

- x A single, basic support issue (password reset, locked out) — that's a one-off ticket, not an MSP relationship opportunity.
- x They want Microsoft's own direct support rather than a reseller/MSP partner.

Objection Handling

If they say...	Ask / respond with...
"We already have an IT provider."	Ask what's working and what isn't — response time, proactive vs. reactive, security posture
"We handle it in-house."	Ask about co-managed instead of a full replacement — augmenting, not replacing, internal

Cross-Sell / Related Offerings

Cybersecurity, Backup/DR, Compliance, and licensing all sell naturally once an MSP relationship is on the table — MSP is the umbrella.

MANAGED IT · 8 of 12

Co-Managed vs. Fully Managed IT

Two shapes of the MSP relationship — know which one to lead with.

Overview

Fully Managed: Wired CIO is the entire IT department — no internal IT staff, or the client wants out of IT entirely.

Co-Managed: there's an internal IT person or team already, and Wired CIO supplements them — extra hands, specialized expertise (security, cloud), after-hours coverage, or a second set of eyes on things the internal team doesn't have bandwidth or skill for.

Wired CIO's Angle

Co-managed is often the easier first "yes" when a prospect already has an internal IT hire — it reduces the perceived threat of "you're replacing my job" and opens the door without a full displacement conversation.

Discovery Questions — Ask On the Call

1. Is there an internal IT person or team today?
2. What do they handle well, and what falls through the cracks?
3. Are you looking to replace internal IT entirely, or augment what you already have?
4. Where's the gap — security expertise, cloud/Azure expertise, after-hours coverage, project capacity?
5. How does the internal IT person feel about bringing in outside help — is this their idea or leadership's?

Buying Signals — Listen For This Language

- + An internal IT hire mentioned alongside a specific gap (security, cloud, after-hours, project work).
- + "Co-managed," "supplement," "extra support," or similar augmentation language.

Cross-Sell / Related Offerings

Security, backup/DR, and cloud are the most common co-managed add-on scopes — lead with whichever gap the internal team named.

CUSTOM DEVELOPMENT · 9 of 12

Custom Application Development

Power Platform, custom Azure-hosted apps, and Dynamics/M365 integrations.

Overview

Wired CIO builds custom solutions on the Microsoft platform — Power Apps and Power Automate, fully custom Azure-hosted applications, and integrations with Dynamics 365 and M365. This is a project-based (not purely recurring) conversation, usually triggered by a specific manual process or gap that no off-the-shelf product solves.

Discovery Questions — Ask On the Call

1. What manual or paper-based process are you trying to replace or automate?
2. Does this need to integrate with an existing system — Dynamics, M365, a legacy database?
3. Is this internal tooling, or a customer-facing application?
4. Do you have a rough scope or budget expectation in mind?
5. What's driving the timeline — is there urgency, or is this exploratory?
6. Who owns this internally — IT, an operations lead, a specific department?

Buying Signals — Listen For This Language

- + "Custom app," "app build," "custom development," "Power Apps," or "Power Automate" mentioned specifically.
- + A document-heavy manual process combined with wanting automation — see the Azure Document Intelligence sheet, this is usually the same conversation.

Red Flags — Not a Fit / Disqualify

- x Small one-off project or free-advice language: "just want some advice," "quick question," "pick your brain," "no budget." We build engagements, not favors.

Cross-Sell / Related Offerings

Azure hosting, Document Intelligence for anything document-heavy, and Dynamics/Power Platform integration are the natural next questions.

AZURE / CLOUD · 10 of 12

Azure Partner / CSP Billing

Consolidated Azure billing, cost management, and support routed through us.

Overview

Wired CIO can act as the CSP (Cloud Solution Provider) partner of record for a prospect's Azure environment — consolidating billing, providing cost management, and giving them a real support relationship instead of being on their own with Microsoft direct.

Wired CIO's Angle

This is often the easiest, lowest-friction "yes" in the whole playbook — same infrastructure, same environment, just better billing and a real partner to call. It's a great foot-in-the-door for a fuller MSP or Dynamics conversation later.

Discovery Questions — Ask On the Call

1. Are you on Azure today — direct with Microsoft, or already through a partner?
2. Roughly what's your monthly or annual Azure spend?
3. Any pain with current billing or support — surprise costs, no one to call, confusing invoices?
4. Are you planning any migration or expansion that would change your spend (on-prem to cloud, new workloads)?

Buying Signals — Listen For This Language

- + Azure billing/cost language, or explicitly looking for a partner/CSP to route billing through.
- + On-prem-to-cloud migration or lift-and-shift language paired with Azure.

Objection Handling

If they say...	Ask / respond with...
"We're direct with Microsoft, why switch?"	Ask about their support experience today — direct billing usually means no dedicated support

Cross-Sell / Related Offerings

A strong opener for a broader MSP, security, or Dynamics conversation once trust is established on billing.

LICENSING · 11 of 12

Microsoft Licensing Support / CSP

M365, security, and specialty SKUs — the easiest entry point into every other conversation.

Overview

Wired CIO sells and supports Microsoft licensing as a CSP: M365 Business Basic/Standard/Premium, O365/M365 E1/E3/E5, F1/F3, EMS, Power BI Pro/Premium, M365 Copilot, Defender variants, Entra ID P1/P2, Teams Phone, and Intune, among others.

Discovery Questions — Ask On the Call

1. What licenses are you on today, and who manages that — Microsoft direct, another partner, internal IT?
2. Roughly how many seats/users?
3. Any known gaps — no MFA/security licensing, no Copilot, no advanced backup?
4. When does your current agreement renew?
5. Who owns procurement and budget for this?

Buying Signals — Listen For This Language

- + A confirmed seat count of 15 or more is our internal strong-signal threshold — smaller confirmed counts still get worked, just at lower priority.
- + Any of the named SKUs above mentioned by name.

Red Flags — Not a Fit / Disqualify

- x Single-seat/freelancer language.
- x They want Microsoft's own direct support instead of a partner.

Cross-Sell / Related Offerings

Licensing is the easiest entry point into every other conversation — MSP, security, Copilot, Dynamics. Always ask what's NOT currently licensed, that's usually the real opening.

CUSTOM DEVELOPMENT · 12 of 12

Azure Document Intelligence

AI-powered document extraction — always pitched as part of a custom app, not standalone.

Overview

Azure Document Intelligence is an AI service that extracts structured data from documents — invoices, forms, contracts, ID documents, claims paperwork. Wired CIO builds it into custom applications and workflows; we don't sell it as a standalone product.

Wired CIO's Angle

Always frame this as part of a custom app development conversation — the real question is "who's going to build the app that uses this," not "do you want this Azure service." Lead with custom app dev, mention Document Intelligence as the engine underneath.

Discovery Questions — Ask On the Call

1. What documents are being processed manually today, and by how many people/how many hours a week?
2. What system would the extracted data need to flow into — an ERP, a CRM, a database, a spreadsheet today?
3. Roughly what volume are we talking about — documents per day or per month?
4. Is there already an app or workflow in mind, or is this purely the manual-processing pain point so far?

Buying Signals — Listen For This Language

- + "Document Intelligence" mentioned by name.
- + Any document-heavy manual process (invoice processing, forms, claims, contracts) combined with wanting a custom app or automation.

Cross-Sell / Related Offerings

Business Central/ERP (invoice processing is the most common use case), custom app dev (the delivery vehicle), and Azure hosting/billing.
