Azure Document Intelligence

AI-powered document extraction — always pitched as part of a custom app, not standalone.

Overview

Azure Document Intelligence is an AI service that extracts structured data from documents — invoices, forms, contracts, ID documents, claims paperwork. Wired CIO builds it into custom applications and workflows; we don't sell it as a standalone product.

Wired CIO's Angle

Always frame this as part of a custom app development conversation — the real question is "who's going to build the app that uses this," not "do you want this Azure service." Lead with custom app dev, mention Document Intelligence as the engine underneath.

Discovery Questions — Ask On the Call

1. What documents are being processed manually today, and by how many people/how many hours a week?
2. What system would the extracted data need to flow into — an ERP, a CRM, a database, a spreadsheet today?
3. Roughly what volume are we talking about — documents per day or per month?
4. Is there already an app or workflow in mind, or is this purely the manual-processing pain point so far?

Buying Signals — Listen For This Language

- + "Document Intelligence" mentioned by name.
- + Any document-heavy manual process (invoice processing, forms, claims, contracts) combined with wanting a custom app or automation.

Cross-Sell / Related Offerings

Business Central/ERP (invoice processing is the most common use case), custom app dev (the delivery vehicle), and Azure hosting/billing.
